DESCRIPTORS: *Albumins, Proteins, *Eggs, Coagula-
 tion, Heat treatment, Stability.

It was determined that an anionic protein such as oval-
 albumin can be stabilized with negatively charged sub-
 stances without influencing the pH of the solution while
 it can be labilized with positively charged substances.
 The extent of turbidity of the protein solution following
 heat treatment seems to depend not so much on the con-
 centration of the labile protein but rather on the ratio
 of labile: stable protein. It can obviously be assumed
